PROJECTS

- Made a wedding planner website (Front end) using HTML and CSS. Had different pages for different resorts, integrated google maps and forms for the enquiry.
- Made a sneaker website (e-commerce) using HTML, CSS and JavaScript. Made a carousel by myself from scratch using JavaScript. Had a counter to select the quantity and calculated the total amount. Created a cart which changes dynamically.
- Made a employer page for a CRM software which was connected to a database to show the information of the corresponding employee.
- Made a spotify clone using HTML, CSS, JS. Made my own API from which I am fetching songs. also Made a music player which had all the functionality.
- Made a word counter using REACT JS. Used different components, useState, prototypes etc. counts the number of words and characters, had a button to convert the text into capital letters and vice versa. Also had a button to enable and disable the Dark mode.
- Made a Todo list app using react, used components like useState, useEffect etc. it is a dynamic app in which we can add edit and delete the different Todos. And all the states are saved in local storage so that the todos are saved when the app is reloaded.
